Did you know:

A new name is added to the national waiting list
every 13 minutes.

Ten percent are New York State residents.
Thousands more are waiting for tissue transplants.

One person who donates organs can
save up to 8 lives,
while a tissue donor can improve 50 or more lives
by restoring eyesight,
helping fight infections in burn patients and
preventing the loss of mobility and disability.

Bone transplants are the
most common type of tissue transplant.
Approximately 80% of human heart valve recipients
are children or women of child bearing age.

The Central New York Eye and Tissue Bank is
dedicated to providing a state-of-the art facility for recovery,
a team dedicated to working with medical professionals,
and a message of hope to the thousands of people
waiting for the gift of life.
